To Whom It May Concern: Castagra Products Inc.,

As a result of our extensive investigations and testing, Kymax Coatings Ltd. has made the decision to strongly endorse the product line.

Over the course of the last year our research and testing of Ecodur 201 revealed that it is not just a better version of the current comparable systems, but is, in fact, inherently different in nature and is what we truly believe to be a generational leap forward in zero VOC, environmentally friendly coating and insulation technology.

We consider the nature and capabilities of this product to be far superior to any of the current systems presently on the market.

Our company has 28 employees and the equipment, experience, and capacity, to apply virtually any coating available on the market. Kymax is one of the few industrial coating companies that are well equipped to handle fast cure, 100% solid coatings in Alberta at present.

As a company, we are dedicated solely to the highest standards of advanced sandblasting, coating and insulation systems from start to finish. We have established a solid reputation as one of the best and most productive industrial coating companies in this province. As such, we are progressive, and committed to adapting to new and improved technology and systems that will keep Kymax on the leading edge in this industry.

Thank you

Jeremy McNabb

Owner/Kymax Coatings Ltd.
